# THIRTY-SIXTH ANNUAL REPORT

OF THE

## BOARD OF SUPERINTENDENCE OF THE DUBLIN HOSPITALS.

---

TO HIS EXCELLENCY THE RIGHT HON. ROBERT  
OFFLEY ASHBURTON, BARON HOUGHTON,

*Lord Lieutenant-General and General Governor of Ireland.*

35, Dawson-street,  
12th June, 1894.

MAY IT PLEASE YOUR EXCELLENCY :

We have the honour to lay before Your Excellency our Thirty-sixth annual Report on the condition and management of the City of Dublin Hospitals receiving Parliamentary Grants, and which were duly inspected by us during the year ended 31st March, 1894.

These are :—

1. Westmorland Lock Hospital.
2. The House of Industry Hospitals, viz :—
  - a. Hardwicke Fever Hospital.
  - b. Whitworth Medical Hospital.
  - c. Richmond Surgical Hospital.
3. Steevens's Hospital.
4. Meath Hospital and County Dublin Infirmary.
5. Cork-street Fever Hospital.
6. Rotunda Lying-in Hospital.
7. Coombe Lying-in Hospital.
8. St. Mark's Ophthalmic Hospital; and
9. Royal Hospital for Incurables, which receives a portion of the Concordatum Fund.

As mentioned in former Reports, our inspections are made without any previous notification to the officials of the several Hospitals.

We inquired into the condition of each Institution, to ascertain if the buildings were in good order, the general management satisfactory, and if due provision were made for the comfort and welfare of the patients.

We examined the dietaries in use, and the manner of serving the food to the patients.

As hygienic measures have assumed so great importance and so extensive a development, special inquiry was made in each

Hospital to determine if due care were bestowed on ventilation, drainage, cleanliness, and the proportion of inmates to space.

We lay stress on the necessity of combating infectious diseases by isolation, segregation, disinfection, and the speedy removal of patients to Hospital, and we have ascertained that these precautions have been carried out as far as possible.

We also lay stress on the necessity of every Hospital receiving Parliamentary Grants in Dublin having a fully qualified Resident Medical Officer as well as a Trained Lady Superintendent, or Matron fully trained as an Hospital nurse, and holding a *bona fide* certificate of such qualification.

Although it does not come strictly within our province, we nevertheless think it right to draw Your Excellency's attention to the importance of a project that has recently been set on foot (following a suggestion contained in our Thirty-fourth and Thirty-fifth Reports) by an influential committee, whose object is the establishment of a Central Pathological Institute in connection with the Dublin Hospitals:

An enormous amount of valuable pathological material which, from its disseminated occurrence, is at present only available for teaching purposes to a limited extent, could thus be fully utilised. It would consist of the *post-mortem* and operation theatre specimens from the various Hospitals, unclaimed bodies from the Unions and the Richmond Asylum. These would form the subject for high-class pathological instruction which would be largely availed of by students. Medico-legal autopsies should, in our opinion, be performed at the proposed Institute, and the student would thus enjoy the advantage which he does not at present possess of seeing this important operation thoroughly and systematically carried out.

A bacteriological laboratory would form an indispensable adjunct to the Institute, and would be devoted to the examination of morbid secretions, and to the diagnosis by the most recent methods of doubtful zymotic diseases in men and animals, as well as to the elucidation of local epidemics, cases of meat-poisoning, &c.

Examinations of water, milk, food-stuffs, &c., by bacteriological methods, could here be conducted by a skilled bacteriologist.

Such an institution would, in our opinion, serve to supplement the work of our Dublin Hospitals in several important particulars, and fulfil many functions that are at present discharged imperfectly, or not at all. It would, we consider, constitute a most essential adjunct to the existing resources of medical education in this city.

The various Statistical and other Tables in Appendices will be found similar in character to those that have hitherto appeared in regular annual sequence, but at the same time indicative of the relative changes and results in the operation of the different institutions.

The financial accounts are rendered in a uniform system, so that it can be seen whether any Hospital is extravagant in its expenditure as compared with others.

On the 1st of April, 1893, there remained 773 patients in these Hospitals under the supervision of our Board.

The number admitted during the year was 10,335, making the whole number under treatment 11,108, of whom 9,882, left the wards either cured or relieved, or were discharged for other causes, and 484 died.

Seven hundred and seventy-three patients remained under treatment in these Hospitals on the 31st March, 1894.

Exclusive of incurables, the mortality was 4·47 per cent. on those treated to a termination.

The total daily average number of beds occupied in these Hospitals throughout the year was 793.

The time spent in Hospital by each patient under treatment (omitting the patients in the Royal Hospital for Incurables) averaged 20·57 days.

Appendix.—Table No. 1 shows a list of diseases of patients treated in the several Hospitals and the number that died of any particular disease during the year ended 31st March, 1894.

Table No. 2 shows the average cost per bed occupied throughout the year ending 31st March, 1894, for maintenance and for establishment, and for both, exclusive of buildings and furniture.

Table No. 3 shows the several sources of income of each Hospital.

Table No. 4 sets forth in detail the chief heads of expenditure of each Hospital.

Table No. 5 gives the number of patients treated in each Hospital, the mortality per cent., the average daily number of beds occupied during the year, and the present extent of accommodation for each class of patients.

Table No. 6 shows the prices of articles supplied to each Hospital per contract or otherwise.

Table No. 7 gives the various dietaries in use in each Hospital.

Table No. 8 gives the names of the Governors of each Hospital, and number of attendances during the year.

#### LOCK HOSPITAL.

We found this Hospital, on inspection, clean and orderly. The various samples of food were of good quality.

As regards the wards, we must repeat what has often been said, that they are on the whole very bare and cheerless, and in the matter of decorations are much behind the standard of the present day.

A large supply of light and attractive literature is still needed, and we feel sure that periodicals and illustrated papers, and books of a popular character, would be much appreciated by the patients.

In previous Reports we noticed several particulars in which improvements were desirable. We are glad to say that many of these suggestions have been adopted and carried into effect; but we regret to report that we again found the laundry in the same faulty position, underneath an occupied ward. We expressed an opinion on several occasions, that no washing should be done in

or near the wards, as it must be injurious and unwholesome to the inmates.

We observed that the lavatory arrangements were not quite perfect, the basins are of an old pattern, and we found two cracked; as the pipes leading from these basins are liable to get stopped with soap, and the plugs to be lost, we suggest that "Tip basins" be substituted, which would obviate every inconvenience in this respect.

We have made the customary inquiries as regards the care and attention bestowed on the patients by the attendants and have received invariably satisfactory replies.

There were 71 patients in this Institution on the 1st of April, 1893; 635 were admitted, and 12 infants were born in the house during the year; 634 patients were discharged; 15 died; and 69 remained on the 31st March, 1894.

The mortality was 2.31 per cent. on the total number treated to a termination.

The time spent in Hospital by each patient averaged 38.61 days, and the average daily number of beds occupied during the year was 76.

#### STEEVENS'S HOSPITAL.

On visiting the several departments of this Hospital we were much gratified by the order, regularity, and cleanliness which prevailed. The wards were well ventilated, the supply of linen ample, and the laundry arrangements good.

As usual, we inquired of the patients as to the care bestowed on them by the attendants, and are glad to report that their replies were satisfactory.

The dietaries of the patients have been carefully revised; butter and vegetables being added so as to secure greater variety of food.

Food safes have been provided for each group of wards, thus ensuring greater cleanliness and economy. Improvements have also been made in the manner of supplying and serving the food to the patients; but considering the distance the kitchen is from the wards, it would be advisable to provide a lift, which would economise labour, and without difficulty enable the dinners to be served hot to the patients.

We made inquiries as to the manner of preparing the tea, which was mentioned in a former Report, as needing improvement. We have now learned that it is prepared in each ward kitchen, which seems to give satisfaction to the patients.

We were much pleased to learn that under the present intelligent and efficient Lady Superintendent the Private Nursing Department has been greatly developed during the past year, the funds of the Hospital having been augmented by a sum of £213 derived from that source.

We ascertained that the nurse of each ward has an exact inventory of all ward utensils, linen, and other property in her charge, and these inventories are compared with the articles at least once a month.

We have been informed that the Governors have under consideration the complete remodelling of the out-door patient department, but are only deterred from undertaking same by the want of funds.

As the Medical Staff is represented on the Governing Body, we believe the most enlightened principles of Hospital management are carried out, and if such did not exist the blame should rest on the Medical Officers. We were, however, not favourably impressed with the post-mortem room, which we found much behind modern requirements, and hope that the Governors may soon be able to make more suitable arrangements.

In a former Report we urged the necessity of having this apartment sufficiently spacious, well-lighted, and drained, and that it should be supplied with hot and cold water.

The mortuary should also be in a separate adjoining apartment, and appropriately arranged, so as to show proper respect to the feelings of the friends of deceased patients.

On the 1st of April, 1893, 87 remained in Hospital; 1,266 were admitted during the year; 1,190 were discharged; 47 died; and 116 remained on the 31st March, 1894.

The mortality was 3.79 per cent. on the total number treated to a termination.

The time spent in Hospital by each patients averaged 23.78 days, and the average daily number of beds occupied during the year was 88.15.

#### THE MEATH HOSPITAL.

We carefully examined the several departments of this Hospital, and found the buildings in good order, and the wards clean and bright.

We ascertained that the supply of linen was sufficient, and that each ward was provided with towels for the use of patients, and those who were unable to perform ablution in the lavatories are attended each morning by a nurse who is responsible for their personal cleanliness.

The various articles of food which we examined were, without exception, of good quality, and the cooking was satisfactory.

On the day of inspection we were of opinion that the male accident ward was somewhat overcrowded, and the beds in too close proximity. We have since been informed that this insufficient accommodation has from time to time occupied the attention of the Committee, but hitherto they have been prevented, by the want of the necessary funds, from erecting the much-needed additional wards; they hope, however, very soon to be able to undertake this work.

Amongst the improvements we observed that the ward kitchens and sculleries on each of the three landings of the main building have been recently tiled.

The sanitary arrangements of the Hospital having been considered defective, an entirely new system of sewerage has been carried out, at a cost of £205, under the direction of Mr. J. T. Fuller, architect.

The lavatories and water-closets have been kept in perfect working order, and also the baths, which are well supplied with hot and cold water.

We observed in the Apothecary's department the greatest care is taken to be prepared for any emergency in case of poisoning. The various antidotes, together with all necessary apparatus, are kept ready for immediate use.

We were also informed that a new Fever wing will very soon be erected in the Hospital grounds, which will confer a great benefit on the sick and suffering poor of the county and city of Dublin.

There were 94 patients in this Hospital at the commencement of the year; 1,273 were admitted; 1,201 discharged; 71 died; and 95 remained on the 31st March, 1894.

The mortality was 5.58 per cent. on the total number treated to a termination.

The time spent in Hospital by each patient averaged 23.72 days, and the average daily number of beds occupied during the year was 88.84.

#### CORK-STREET HOSPITAL.

It is satisfactory to be able to report that this institution continues to be conducted with great efficiency. The same care which we observed on previous visits with regard to the condition of the wards and the treatment of the patients was apparent.

The arrangement for emptying, rinsing, and disinfecting ward utensils, is creditable, an example which might be followed in other Hospitals.

The sewerage of the Hospital is said to be satisfactory, having been examined and reported on by the Resident Engineer of the Dublin Sanitary Association.

From the returns we learn that the resources of the institution have been for the past year specially taxed by reason of the prevalence of epidemic diseases; and although the number of patients treated is far in excess of the average, all suitable cases have been admitted, and the various diseases segregated.

We were much pleased with the new epidemic house which has replaced the old wooden structure, originally occupied as a temporary hospital during the small-pox epidemic.

This building consists of two landings, perfectly separated from each other, containing respectively two medium-sized wards, and one isolated room for suitable cases. The kitchen, lavatories, and sanitary arrangements are well designed. Each story has an attached verandah for patients to exercise in the open air under cover, so that the danger of mingling with other hospital patients is avoided.

Owing to the dearth of water during the late autumn and early winter, and consequent low pressure, the Managing Committee have been obliged to put in a series of pipes from the laundry pumps to fill each of the closet tanks, thus securing an ample supply of water for flushing purposes at any time,

St. Vincent's, Steevens's, and Jervis-street Hospitals have made arrangements by which they send their nurses to this Hospital for a three months' training in fever nursing. This scheme is carried out without any friction, and appears to give general satisfaction.

At the commencement of the year 78 patients remained in the Hospital; 1,656 were admitted; 1,510 were discharged; 146 died; and 78 remained on the 31st of March, 1894.

The mortality was 8·81 per cent. on those treated to a termination. The average daily number of beds occupied was 108·08, and the time spent in Hospital by each patient averaged 22·75 days.

#### HOUSE OF INDUSTRY HOSPITALS.

The administration of these Hospitals is able and successful. The fact that members of the medical staff are on the Governing Board gives vitality to its management and obviates unnecessary friction. The expenditure on extra diets, stimulants, and in the pharmaceutical department, is specially supervised by them, which is a means of controlling this expenditure, or at least of fixing the responsibility for it, should it be found excessive.

The wards presented a cheerful appearance, and the beds and bedding were properly looked after. Satisfactory replies were given to us by the patients, whom we interrogated on the subject of their fare, its cooking and service.

We were informed that there is always an available supply of hot water for baths, but we were sorry to observe that those which we inspected were worn and unsightly, and we consider they should be renewed, or, better still, earthenware substituted for metal.

We have ascertained that the Governors pay regular visits to the wards, and give the patients every opportunity of speaking with them.

The refuse of the Hospitals is removed daily by the Dublin Corporation carts. We would again advert to the close proximity of very objectionable dairy yards to the Richmond and Whitworth Hospitals. We were informed that during the winter season 150 to 200 cows are housed in very small space under the windows of the Hospitals. We need not point out that such mephitic centres spread abroad organic emanations which must be injurious to the patients. We are further of opinion that dairy yards in a city are at all times a serious danger to the public health.

We hope that the Public Health Committee of the Dublin Corporation, which is vested with ample power, will require these yards to be concreted and cleaned daily, so that the accumulated refuse should not permeate the soil.

We were much pleased to inspect the detached building recently constructed in connection with the Hardwicke Hospital for the segregation of certain cases of infectious diseases.

The building is two stories high, with a separate pavilion for

patients, divided from the nurses' wing by the staircase and corridors. On the ground floor of the pavilion there is a ward for male patients with windows on each side, and also on the south end. At the further end of this ward is the sanitary block, separated from it by a lobby and passage, from which open the baths, water-closets, and sculleries. These are fitted up with the most approved modern appliances, and have thorough cross ventilation. On the upper floor of the pavilion is the ward for female patients, with sanitary arrangements similar to those on the ground floor. These wards are of a moderate size, as the object is to prevent the spread of contagion by the segregation of patients when first attacked, and not so much to meet the occurrence of an extensive epidemic.

We believe a Hospital is necessary in this populous locality for the reception and treatment of cholera, small-pox, and fever patients. The removal of such cases to a distance is objectionable, as tending seriously to impair the patients' already feeble powers.

The various financial accounts appeared to be well and carefully kept, and are checked regularly by the Governors at their monthly meetings.

We have been informed that Mrs. Byrne, lately Matron of the Institution, having retired, the Governors have recommended her for a pension on her superannuation.

Miss MacDonnell, Superintendent of Nurses in the Richmond Hospital, has been appointed to the office of Lady Superintendent of the three Hospitals, and is also now responsible for the fulfilment of the duties relating to the kitchen and laundry departments, formerly performed by the Matron, in addition to the control of the nursing establishment.

A large and increasing number of trained and skilled nurses are supplied as required to private patients in all parts of the county, and bring in an income in aid of the Hospital funds.

#### HARDWICKE HOSPITAL.

Thirty-seven patients remained in this Hospital on the 1st of April, 1893; 580 were admitted during the year; 539 were discharged; 55 died; giving a mortality of 9.25 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied during the year was 39.83, and the time spent in Hospital by each patient averaged 23.56 days.

#### WHITWORTH HOSPITAL.

On the 1st of April, 1893, 34 patients remained in Hospital; 541 were admitted; 496 were discharged; 45 died; giving a mortality of 8.31 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied throughout the year was 34.84, and the time spent in Hospital by each patient under treatment averaged 22.12 days.

#### RICHMOND HOSPITAL.

There were 62 patients in this Hospital when the year commenced; 703 were admitted, including one born in the house; 688 were discharged; 23 died; giving a mortality of 3.23 per cent. on 711 cases treated to a termination.

The average daily number of beds occupied in the year was 51.94; and the time spent in Hospital by each patient averaged 24.78 days.

#### THE ROTUNDA LYING-IN HOSPITAL.

For several years we have observed marked and continued progress and improvement in this Hospital. We found the wards in excellent order, and the condition and treatment of the patients in every respect satisfactory.

The chief structural work at present in progress is the erection of a new auxiliary Hospital to be provided with all modern improvements, well-ventilated wards, good sanitary accommodation, operating theatre, &c.

This structure will be connected with the main building by a corridor on each landing, and the lift and sanitary block are so arranged that they will be equally of use to both houses.

There are also provided closets for soiled clothes, disinfecting chambers, and stores for patients' clothes, &c.

The ground floor provides for dispensary, waiting-rooms, &c., servants' and wardmaids' bedrooms, and private wards.

The first-floor ward has accommodation for 32 beds, also private wards, theatre, kitchen, and nurses' room.

Above this floor arrangements are made for bedroom accommodation for both night and day nurses, superintendents, and charge nurses' rooms, workrooms, &c.

The exterior is to be carried out as much as possible in the same style as the main building, except substituting red brick in walls instead of stone.

We hope soon to see this much-wanted addition completed, for it will be a great benefit to the patients, and from its close proximity to, and connection with the main building, a saving in the working of the institution will be effected.

We hope that the post-mortem room is to be sufficiently spacious and well ventilated, with the most approved means of renewing the atmosphere; otherwise persons who attend at autopsies are liable to carry infection in their clothes, hands, and hair, from emanations from the dead—a fruitful and unsuspected source of the spread of disease.

We are glad to be informed that the Dublin Corporation have restored to this Hospital the annual grant of money which they had withdrawn some years ago; they considered that they were not justified in appropriating the funds of the city to any institution over whose administration they had no control.

We have already expressed an opinion on this subject, and consider that a self-elected governing body of a Hospital supported by the public is objectionable, and particularly in this institution, as the selection of Governors is limited to persons

who have paid £50, or to annual subscribers of £10, the number of Governors not to exceed sixty. We hope that steps may soon be taken to amend the Charter so as to give effect to the recommendations of the Dublin Hospital Commissioners of 1856 and 1885.

On the 1st of April, 1893, there were 27 patients in the labour wards; 1,772 were admitted during the year; 1,402 were discharged after delivery; 344 were discharged, not having been delivered; 17 died; and 36 remained in Hospital at the end of the year.

Thirty-two patients remained in the auxiliary or chronic department on the 1st of April, 1893; 447 were admitted; 441 discharged; 16 died in the year ended 31st March, 1894; and 22 then remained.

The average daily number of beds occupied throughout the year by labour cases was 35.21, and that of the chronic class 26.30.

The time spent in Hospital by labour cases averaged 7.14 days, and that by the chronic class 20.08 days.

The mortality of the labour patients, deducting non-parturient cases, was 1.19 per cent, and that of the chronic class 3.5 per cent.

#### THE COOMBE HOSPITAL.

This Hospital, situated in a poor part of the city, has had for many years a reputation for benevolence and efficiency; but in July certain irregularities in the internal management of the Hospital having been brought under the notice of the Board of Guardians and Directors, they asked for our interposition, and, at their request, we deemed it our duty to institute a sworn Inquiry into these alleged charges.

After a most exhaustive investigation, and having held several meetings thereon, and having examined all those whom we considered could afford information to our Board, we arrived at the following conclusions as the result of this Inquiry:—

1st. That due supervision and discipline were not observed, which caused great irregularity in the working of the Hospital.

2nd. That the necessary antiseptic precautions were not enforced for the welfare and safety of the patients.

3rd. That drunken and uncivil servants were employed in the Hospital.

4th. That great waste in material and expenditure were caused by the want of proper supervision and care in the Pharmaceutical Department.

5th. The alleged charges of immorality were unsupported by facts.

The following suggestions and recommendations were drawn up by us, and forwarded for the guidance and adoption of the Managing Committee:—

1st. The election of a highly professionally educated Master, with capacity and executive ability, to administer and command judiciously but firmly.

2nd. The election of a Lady Superintendent and Matron, with tact and administrative ability, fully trained as a hospital nurse, and holding a *bond fide* certificate of such training.

3rd. That the Rules for the management of the Pharmaceutical Department be entirely re-cast, and that a proper, competent, and responsible official be appointed, who should prevent unauthorized persons entering this Department and carrying away medicine without check or hindrance.

Having regard to the several Dispensaries in the vicinity of the Coombe, the Board of Superintendence are of opinion that the Extern Dispensary of the Hospital should be limited to patients solely affected by diseases peculiar to women.

4th. The Board consider that the Hospital is not supplied with capable or efficient nurses; and recommend the election of at least three fully trained Charge or Staff Nurses for the Departments, and one fully trained Night Staff Nurse.

The system of placing the lives of patients in the sole charge of probationary nurses of two or three months standing cannot be too strongly condemned. We recommend also that rules for the guidance of the nurses should be drawn up, with the view that antiseptic precautions be more efficiently carried out in the wards.

5th. The Board recommend that two members of the Governing Body be elected each month to act as a Visiting Committee, to inspect the Hospital, and visit every department, confer with the different officials, and make a report in writing for each meeting of the Board of Directors.

6th. The Board of Superintendence recommend a change in the Charter for the election of the Managing Committee, and suggest that the election be annual on a stated day in the year, and that the Managing Committee be elected from the annual subscribers of two guineas, or from the life governors who have paid a single subscription of twenty guineas.

We are glad to report that several of these recommendations have been carried out, and the present Master has already displayed much energy, earnestness, and conscientiousness; and we have no doubt that this Institution will ere long occupy a prominently good position.

In reference to the above recommendations made by us, we have received the following letter in reply :—

“Coombe Lying-in Hospital, Dublin,

“29th March, 1894,

“MY LORD,

“Referring to your Lordship's communication of the 9th January, 1894, I am directed by my Board to convey their grateful thanks both to your Lordship and to the Board of Superintendence of the Dublin

Hospitals for their gracious compliance with the request of the Guardians and Directors, in holding a sworn Inquiry into the alleged irregularities in the management of this Hospital.

"With reference to the six recommendations which you have so kindly submitted for their future guidance, I may mention what has been, and is being done—viz. :—

#### "RECOMMENDATION I.

"On the 14th December, 1893, the Guardians and Directors elected, in the terms of their Charter, Frederick William Kidd, Esq., M.D., Univ. Dub., as a Master, a gentleman, they feel confident, eminently possessing the qualifications which you suggest they should require.

#### "RECOMMENDATION II.

"On the 22nd February, 1894, the Board elected Miss Hester Egan out of thirty-two applicants. This lady was fully trained in the Meath Hospital (1889 and 1890), and afterwards obtained the Diploma of the Obstetrical Society of London. She entered on her duties on the 1st instant, and is carrying them out in every particular, to the complete satisfaction of the Master and Board.

#### "RECOMMENDATION III.

"The rules mentioned in my letter of the 28th November, 1893, with regard to the supervision of the Drug Department and Apothecary's shop, are being strictly carried out. I may also add that the Master now countersigns all orders for drugs, and that the key of the Drug Department is in the custody of the Assistant Master on duty.

"As to the Extern General Dispensary, the Master considers it a very valuable recruiting ground in obtaining patients for the special Dispensary, and to restrict it in any way he considers would do grievous harm to the Gynecological Department of the Institution, and largely limit its teaching power.

#### "RECOMMENDATION IV.

"The Master has carefully considered the nursing arrangements, and recommends a Staff Nurse on each landing in the Labour House, and a Staff Nurse in the Chronic Department. The latter Staff Nurse to be assisted in her duties by such Probationers from the Labour House as may be arranged or directed by the Matron or Medical Staff.

"In the Labour House each Staff Nurse to act as a night nurse on the landing in turn, and to sleep in the ward where patients are convalescing.

"The Master does not consider that with the foregoing arrangements Night Nurse would be necessary or desirable.

"As to antiseptic precautions, the Master has reported that he has laid particular stress on this point in his instructions to the Nurses since his appointment; that he has been ably seconded in this by his Assistant Masters; and that it is his intention to draw up rules for the guidance of Nurses and Students on this important subject, and have same printed and hung up in each ward.

"RECOMMENDATION V.

"Monthly Visiting Governors have been appointed since January last, and they have recorded the results of their careful inspections in the Visiting Committee's Report Book.

"RECOMMENDATION VI.

"As to the concluding recommendation of your Lordship's Board, my Guardians and Directors do not believe that it would be conducive to the interests of the Hospitals at present to seek for a change in their Charter, especially as the selection of Guardians and Directors has been, and is practically made among the classes mentioned in the recommendation.

"I have the honour to remain

"Your Lordship's obedient servant,

"(Signed),

H. LEONARD, Registrar.

"The Right Hon. Viscount Powerscourt, K.P., &c., &c.  
Chairman of the Board of  
Superintendence of the Dublin Hospitals."

Eight labour patients remained in Hospital on the 1st of April, 1893; 472 were admitted during the year; 463 were discharged; 109 were discharged not having been delivered; 4 died; and 13 remained at the close of the year.

Ten patients remained in the chronic wards on the 1st of April, 1893; 241 were admitted; 242 discharged; 1 died; and 8 remained at the close of the year.

The average daily number of beds occupied throughout the year by labour cases was 9.02, and by chronic cases 9.41.

The time spent in Hospital by labour patients averaged 6.86 days, and that by the chronic class 13.69 days.

The mortality of patients admitted to the labour wards, deducting 109 that were discharged not having been delivered, was 4 deaths in 358 cases, or 1.11 per cent., and for the chronic class 1 died, giving a mortality of 0.41 per cent.

ST. MARK'S OPHTHALMIC HOSPITAL.

This important and useful Institution has been efficiently worked during the past year as far as circumstances would admit, and it has maintained its high reputation for teaching; but the structural defects of the building, and the want of proper accommodation, have to a great extent impeded the sphere of its usefulness. We were glad, however, to be informed that negotiations for bringing about an amalgamation of this Institution and the National Eye and Ear Infirmary have been continued during the past year, and will, it is expected, be shortly completed, there being now but one or two matters of small detail to be settled between the governing bodies, and these it is proposed to refer to arbitration.

On the 1st of April, 1893, 50 patients were in Hospital; 689 were admitted during the year; 694 were discharged; and then 45 remained.

The average daily number of beds occupied during the year was 45.48, and the time spent in Hospital by each patient averaged 22.46 days.

#### THE ROYAL HOSPITAL FOR INCURABLES.

This Hospital continues to deserve the favourable comments we have made in former Reports as to its general administration, and as to the kindness and attention bestowed on the patients. The efforts of the Governors to develop the resources of the Institution have been gratifying and encouraging, and the financial condition is so good that it is expected that two new wards will be opened in May or June next. These wards will contain forty-eight beds and have a southerly aspect, and are in every way well sheltered and most suitable for invalids suffering from chest affections.

It is contemplated to allot the upper floor ward to consumptive female patients. This Institution deserves, in our opinion, the highest praise, as its great extent and admirable arrangements minister in the best manner to the comforts of the closing days of its inmates.

One hundred and eighty-three patients remained in Hospital on the 1st April, 1893; 48 cases were admitted; 7 were discharged or resigned; 44 died during the year; and 180 remained on the 31st March, 1894.

The mortality was 86.27 per cent. on the total number of cases treated to a termination.

The time spent in Hospital by each patient averaged 28.15 days.

The average daily number of beds occupied throughout the year was 179.83.

THOMAS EDWARD GREY,  
Registrar.

No. 7,853

Dublin Castle,  
21st June, 1894.

SIR,

I have to acknowledge the receipt of your letter of the 18th instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Report of the Board of Superintendence of the Dublin Hospitals for the year ended 31st March, 1894.

I am, Sir,

Your obedient Servant,

W. S. B. KAYE.

W. J. MARTIN, Esq., M.D.

Secretary,

35, Dawson-street.
